

Super Store Sales

Power BI Dashboard — Deep Analysis Report

A comprehensive breakdown of sales performance, profitability, customer segments, product categories and regional trends — derived from the Microsoft Power BI Super Store dashboard.

■ Total Sales	■ Quantity Sold	■ Total Profit
■ 522K	7,000 Units	■ 68K

■ **Dashboard Filter Active:** Region = **West** (data shown reflects West region only. Other regions: Central, East, South — selectable via tab filter.)

■ Table of Contents

1. Executive Summary

The Super Store Sales Power BI dashboard provides a real-time, interactive view of the retail store's business performance across multiple dimensions — time, geography, product category, customer segment, and fulfillment mode. The data presented covers fiscal years **2019 and 2020**, filtered to the **West region** in this view.

Key highlights for the West region:

- Total revenue of **■522,000** across all product categories.
- Total quantity sold: **7,000 units** — indicating high-volume, moderate-value transactions.
- Net profit of **■68,000** — a profit margin of approximately **13%**.
- Office Supplies leads revenue at **■0.20M**, followed closely by Technology and Furniture.
- Standard Class shipping dominates at **96K** — suggesting customers prioritize cost over speed.
- Consumer segment accounts for the largest share at **44%** of total sales.
- COD (Cash on Delivery) is the most preferred payment mode at **43%**.

2. Dashboard Overview & Layout

The dashboard is built in **Microsoft Power BI Desktop** and follows a dark-themed, professional design with blue tones. It is divided into the following visual sections:

Section	Visual Type	Location	Purpose
KPI Cards (Sales, Qty, Profit)	Card Visuals	Top-Center	Quick performance snapshot
Sales by Category	Horizontal Bar	Top-Right	Category-wise revenue comparison
Sum of Sales by Month & Year	Line Chart	Mid-Left	Sales trend 2019 vs 2020
Sum of Profit by Month & Year	Line Chart	Mid-Center	Profit fluctuation over months
Sales of Sub-Category	Horizontal Bar	Mid-Right	Top sub-category performance
Sales of Ship Mode	Horizontal Bar	Far-Right	Delivery preference analysis
State Map	Filled/Bubble Map	Bottom-Left	Geographic sales distribution
Sales by Segment	Donut Chart	Bottom-Center	Customer segment share
Sales by Payment Mode	Donut Chart	Bottom-Right	Payment preference analysis
Region Filter Tabs	Slicer / Tabs	Top-Filter	Central / East / South / West

■ *Insight: The dashboard uses **region-based tab slicers** at the top, allowing stakeholders to instantly switch between Central, East, South, and West performance views without reloading the report.*

3. Key Performance Indicators (KPIs)

KPI Metric	Value	Unit	Interpretation
Total Sales	522K	■ (INR)	Total revenue generated in the West region across all categories and time
Total Quantity	7K	Units	Number of items sold — high volume indicates active customer base
Total Profit	68K	■ (INR)	Net earnings after deducting all costs; profit margin ≈ 13%

Detailed KPI Analysis:

- Sales (■522K):** This represents the gross revenue. The 'K' notation means thousands — so total sales = ■5,22,000. This is West region data only; total company revenue would be significantly higher across all four regions.
- Quantity (7K):** 7,000 units sold implies an average selling price of ■522,000 ÷ 7,000 = approximately ■74.57 per unit. This suggests a mix of low-cost (office supplies) and high-cost (tech) items.
- Profit (■68K):** A 13% profit margin in retail is considered **healthy**. It suggests good cost management, though there is room for improvement — especially in Furniture (typically lower margin).

4. Sales Trends — Monthly Analysis (2019 vs 2020)

The **line chart** in the dashboard's mid-left section displays the monthly sales trend for two fiscal years — **2019 (light blue line)** and **2020 (dark blue line)**, from January through October/November.

Month	2019 Sales	2020 Sales	YoY Trend	Observation
Jan–Feb	Low (~0.00M)	Low (~0.00M)	Flat	Post-holiday slowdown; lowest sales period
Mar–Apr	Rising	Rising	↑	Spring demand pickup; early quarter boost
May–Jun	~0.02M	~0.02M	Stable	Mid-year plateau — consistent demand
Jul–Aug	Moderate	Higher	↑ 2020	2020 shows stronger mid-year performance
Sep–Oct	~0.05M peak	~0.04M	↓ 2020	2019 peaks in Sep; 2020 steadier growth
Nov	N/A	Rising	—	2020 extends into Nov; holiday season starts

■ **Key Insight:** Both years follow a **similar seasonal pattern** — low start, gradual rise, and a peak toward Q3/Q4. The 2020 data extends further (through November), showing the store remained active during the pandemic year. The Q3 2019 peak (~■0.05M) suggests a **back-to-school or festival season demand spike**.

5. Profit Trends — Monthly Analysis

The **profit line chart** (mid-center) tracks month-wise profitability for 2019 and 2020. Unlike sales (which trend upward), profit shows **high volatility** — meaning not all high-sales months are profitable.

Critical Observations:

- **Negative Profit Months:** Some months dip to 0.00M or below — indicating months where costs exceeded revenue. This can happen due to heavy discounting, returns, or high shipping costs.
- **Profit Peaks:** Sharp upward spikes (~0.01M) in certain months suggest seasonal promotions or bulk corporate orders with good margins.
- **2019 vs 2020:** Profit patterns for both years look similar in shape, but 2020 shows slightly smoother fluctuations — possibly due to better cost control or pricing strategy adjustments.
- **Month-end spikes:** Profit often jumps at quarter-end months (March, June, September, December) — common in B2B retail due to budget-cycle purchasing.

Profit Pattern	Likely Cause	Business Impact
High Volatility	Discounts & seasonal promotions	Unstable cash flow planning
Negative months	Returns, high discounts, freight costs	Margin erosion risk
Quarter-end spikes	B2B bulk orders, corporate purchases	Revenue predictability
2020 slightly smoother	Pricing discipline improvement	Better margin management

6. Sales by Product Sub-Category

The horizontal bar chart in the mid-right section shows the top 3 performing sub-categories visible in the current (West region) view:

Sub-Category	Sales Value	Share of Top-3	Category Parent	Strategic Note
Phones	■57K	33.3%	Technology	Highest-value item; drives tech revenue
Chairs	■57K	33.3%	Furniture	High-ticket furniture item; low margin
Binders	■57K	33.3%	Office Supplies	High-volume, repeat purchase item

■ *Key Insight:* All three sub-categories show **identical sales (■57K)** — this is statistically unusual and suggests either: (a) the data has been filtered/aggregated at the ■57K level, or (b) the dashboard is displaying top-3 tied performers. In a real business scenario, Phones typically generate **higher revenue per unit** while Binders drive **volume-based revenue**.

7. Sales by Ship Mode

The **Ship Mode** horizontal bar chart (top-right quadrant) reveals customer preferences for delivery speed and how it correlates with sales volume:

Ship Mode	Sales	% of Total	Speed	Cost Level	Insight
Standard Class	96K	59.3%	5–7 days	Low	Most preferred — price-sensitive customers
Second Class	34K	21.0%	3–4 days	Medium	Moderate urgency buyers
First Class	29K	17.9%	1–2 days	High	Premium customers, smaller share
Same Day	~3K	1.8%	Same day	Highest	Urgent orders — very niche segment

Business Implications of Ship Mode Data:

- **Cost Optimization:** With 59% choosing Standard Class, the company can negotiate bulk rates with standard shipping carriers to reduce logistics costs significantly.
- **Upselling Opportunity:** Second and First Class together = 39% of orders. These customers value time — they could be targeted with premium membership or express delivery subscription plans.
- **Same Day Limitation:** At only 1.8%, Same Day delivery is underutilized. This could indicate poor availability or high prices — a missed opportunity for urgent B2B orders.

8. Sales by Category

The **Sales by Category** horizontal bar chart (top-right) compares revenue across the three main product categories:

Category	Revenue	Bar Color	Typical Margin	Strategic Role
Office Supplies	■0.20M (200K)	Orange/Amber	Medium (15–25%)	Volume driver — frequent repeat purchases
Technology	■0.16M (160K)	Blue	High (20–35%)	Profit driver — high-value, lower volume
Furniture	■0.16M (160K)	Gold/Yellow	Low (5–12%)	Revenue contributor — high ticket, low margin

■ *Insight: Office Supplies leads in revenue but likely has **lower per-unit value** — compensated by high frequency. Technology matches Furniture in revenue but has **significantly higher profit margins**. Strategy should focus on growing Technology sales while maintaining Office Supplies volume.*

9. Sales by Customer Segment

The **donut chart** (bottom-center) breaks down total sales by customer segment — a crucial dimension for targeted marketing and product strategy:

Segment	Share	Typical Profile	Avg Order Value	Marketing Strategy
Consumer	44%	Individual buyers, households	Low–Medium	Loyalty programs, discounts, seasonal offers
Corporate	35%	Business clients, SMEs	Medium–High	Account management, bulk pricing, invoicing
Home Office	21%	Freelancers, WFH professionals	Medium	Bundle deals, productivity tools focus

Segment Analysis:

- **Consumer Dominance (44%):** The largest segment. Focus on **retention, loyalty programs, and seasonal campaigns** (festivals, back-to-school). Average order values are lower but frequency is high.
- **Corporate Segment (35%):** Despite being smaller by count, Corporate clients likely contribute **disproportionately higher revenue per order**. B2B relationships should be prioritized — dedicated account managers, credit terms, bulk discounts.
- **Home Office (21%):** A growing segment — especially post-2020 with remote work trends. Products like ergonomic chairs, desk supplies, and tech accessories are prime targets for this group.

10. Sales by Payment Mode

The **payment mode donut chart** (bottom-right) reveals how customers prefer to pay — critical for cash flow management and digital payment strategy:

Payment Mode	Share	Cash Flow Impact	Risk Level	Action Point
COD (Cash on Delivery)	43%	Delayed — payment on delivery	Medium	Reduce COD share; incentivize pre-payment
Online Payment	36%	Immediate — instant settlement	Low	Promote via cashback, discount coupons
Cards	22%	T+1 to T+2 settlement delay	Low	Maintain card acceptance; no extra charges

■ **Key Concern: COD at 43% is the highest** — this creates operational risk. COD orders have higher return rates, delayed cash realization, and higher logistics cost (failed delivery risk). Transitioning customers to Online payments should be a priority through incentives like **2–5% cashback on prepaid orders**.

11. Geographic Distribution — State Map

The **Bing Maps visual** (bottom-left) shows sales distribution across US states using bubble/dot markers. The map is filtered to the West region and displays state-level concentration of sales.

Geographic Insights:

- **West Region Coverage:** The map shows dots concentrated across Western US states — primarily California, Washington, Oregon, Nevada, Arizona, and Colorado.
- **California Dominance:** Based on Super Store datasets, California (CA) is typically the highest-revenue state in the West — driven by its large population, tech industry, and corporate density.
- **Sparse Coverage:** States like Montana, Wyoming, and Idaho likely show minimal dots — lower population density means lower addressable market.
- **Bubble Size:** If bubble sizes vary, larger bubbles indicate higher sales concentration — helping identify priority markets for inventory allocation and sales team focus.
- **Powered by Microsoft Bing:** The map uses Bing geocoding to plot coordinates — enabling drill-down to city-level analysis if configured.

■ **Strategic Recommendation:** States with large bubbles should get priority in inventory stocking and faster shipping options. States with low/no activity should be evaluated for targeted expansion campaigns or regional partnerships.

12. Business Insights & Recommendations

Based on a thorough analysis of all dashboard visuals, the following strategic recommendations are identified for the Super Store management team:

■ Revenue Growth	GROWTH
› Expand Technology product range — highest margin category. Invest in bundling Phones with accessories. › Target Corporate segment with dedicated account managers and volume-based pricing tiers. › Run seasonal campaigns in Q3 (July–September) — historically the peak sales period.	
■ Profitability	PROFIT
› Review Furniture pricing and discounting policies — typically lowest margin category. › Reduce excessive discounting in low-demand months (Jan–Feb) to protect margins. › Analyze negative-profit months and identify which products/customers cause margin erosion.	
■ Logistics	OPS
› Negotiate bulk contracts with Standard Class shipping partners to reduce per-unit freight cost. › Introduce a 'Same Day Premium' membership program to grow the 1.8% same-day segment. › Optimize warehouse location in high-density states (California) to reduce Standard Class delivery time.	
■ Payments	FINANCE
› Launch a prepaid incentive campaign: 3–5% extra discount on Online or Card payments. › Implement COD verification calls to reduce failed deliveries and return rates.	

› Partner with UPI platforms (PhonePe, GPay) to enable seamless digital payment at checkout.

■ Customer Retention

CRM

- › Launch a Consumer Loyalty Program — points system for repeat buyers.
- › Create a Home Office bundle: chair + binder + phone accessory combo at 10% off.
- › Use Power BI's customer drill-down to identify high-LTV (Lifetime Value) customers for personalized outreach.

13. Conclusion

The **Super Store Sales Power BI Dashboard** is a powerful, well-structured business intelligence tool that provides decision-makers with a **360-degree view** of the store's performance across time, geography, product, customer, and operational dimensions.

The West region — analyzed in this report — demonstrates:

- A **healthy revenue base of █522K** with solid profit of █68K (13% margin).
- **Office Supplies as the revenue leader**, with Technology offering the best margin potential.
- A **consumer-dominated** customer base (44%) with strong corporate opportunity (35%).
- **Standard shipping preference** (59%) offering cost-saving and negotiation leverage.
- **COD dominance (43%)** — a risk that digital payment initiatives can address.
- Clear **seasonal patterns** with Q3 peaks — ideal for targeted inventory and marketing planning.

Final Metrics Summary Table

Metric	Value	Benchmark*	Status
Total Sales	█522K	N/A	█ Active
Total Quantity	7,000 units	N/A	█ Active
Total Profit	█68K	N/A	█ Positive
Profit Margin	~13%	10–15% retail	█ Healthy
Top Category	Office Supplies (█0.20M)	—	█ Volume Leader
Top Sub-Category	Phones / Chairs / Binders (tied █57K each)—		█ Tied
Top Ship Mode	Standard Class (96K / 59%)	—	█ Cost-Preferred
Top Customer Segment	Consumer (44%)	—	█ Mass Market
Top Payment Mode	COD (43%)	Online preferred	██ High COD Risk
YoY Trend	2019–2020 similar patterns	—	█ Stable Growth
Data Region	West (filtered view)	4 regions total	██ Partial View

*Benchmarks are general retail industry averages. Actual performance targets should be set based on company-specific goals and historical baselines.

█ This report was generated from the Super Store Sales Power BI dashboard screenshot. For live data, open the Power BI report and use the region slicers to explore Central, East, South, and West performance independently. All values shown are for the **West region** and cover **FY 2019–2020**.
